Education

Télécom Paris — Institut Polytechnique de Paris

Palaiseau, France

Grande École degree (MSc in Engineering)

2024 – Present

- GPA: 4.0/4.0
- Specialization in Computer Graphics, 3D Applications, Image Processing, and Machine Learning
- France's top-ranked graduate school for computer science and digital technologies

Lycée Pierre Corneille

Rouen, France

Preparatory Classes for Engineering Schools, MPSI / MP*

2022 – 2024

- Intensive two-year curriculum in advanced mathematics, physics, and computer science
- Preparation for the nationwide competitive entrance examinations to French “Grandes Écoles”

Projects

Research Project — Machine Learning for Physical Simulation

Télécom Paris, Palaiseau, France

antoningranados.github.io/projects/cloth_dl.html

September 2025 – Present

- Conducting research on cloth simulation using machine learning models for applications in computer graphics
- Supervised by Kiwon Um, Ph.D., researcher in learned physical simulation

Academic Challenge — Architecture of Complex Systems, 1st Place

IP Paris, Palaiseau, France

[Link to the page of the challenge](#)

October 2025 – Present

- Work in a group of 4 students, received an additional prize: “Special Catia Magic price”
- Challenge about modeling a system of systems for defense applications using Catia Magic

Programming Competition — Swarm Rescue, 1st Place

IP Paris, Palaiseau, France

[Link to the leaderboard](#)

October 2025 – March 2026

- Challenge in a group of 3 students
- Programming competition built around the simulation of a swarm of drones working to rescue injured people

Personal Project — Path Traced Rendering Application

Palaiseau, France

antoningranados.github.io/projects/vk_ray.html

June 2025 – Present

- Developing a rendering engine in C++ and GLSL with Vulkan
- Interactive rendering of complex 3D scenes with physically based lighting and global illumination using path tracing techniques

Academic Project — Real-Time Smoke Simulation on the GPU

Télécom Paris, Palaiseau, France

antoningranados.github.io/projects/gpu_smoke.html

February 2025 – June 2025

- Second-semester engineering project supervised by Kiwon Um, Ph.D.
- Implemented a real-time GPU-based smoke simulation integrated into the Godot game engine

Research Project — Machine Learning for autonomous driving in a racing video games

Rouen, France

antoningranados.github.io/projects/tipe.html

September 2021 - June 2023

- Created an autonomous driving model for vehicles in racing video games
- Graded 19.4/20 in the competitive entrance examinations for the French “Grandes Écoles”

Professional Experience

Safran Nacelles

Le Havre, France

Engineering Intern – Digital Tools & Reporting

July – August 2025

- Designed and developed an internal SharePoint website to support communication of the Safety Management System
- Automated executive-level reporting dashboards using Power BI

Skills & Languages

Technical Skills

- Programming: C, C++, Python
- Graphics: OpenGL, Vulkan, GLSL
- Machine Learning: PyTorch (+ torch vision/geometric)
- Tools: Git, LaTeX, Typst
- Data & BI: Excel, SharePoint, Power BI

Languages

- French: Native speaker
- English: C1 (academic and professional context)
- Mandarin Chinese: A2
- Italian: A1
- German: beginner
